Number lines; how/why do you use them?

Hosted by [@martynyeouk](https://twitter.com/martynyeouk)

This is a brief summary of the discussion – to see all the tweets, follow the hashtag #mathscpdchat in Twitter

Some of the areas where discussion focused were:

- number lines featuring in the **learning of Y1 pupils**, for example pupils responding to the prompt 'There are many ways to count!' by counting in jumps and writing their numbers in lines;
- gaining insight into the '**number-confidence**' of **Y7 pupils** by challenging them to draw the number lines that they 'have in their heads';
- **estimating, or deducing the exact, values** of numbers at points on number lines with equal divisions and where at least two numbers are shown; linking to axes on graphs, ratio and scaling;
- pupils using number lines as **calculating-aids when solving problems**, for example when pupils are trying to solve Foundation tier GCSE problems involving time or timetables;

- links to **'zoomable' number lines** that allow users to 'zoom' in and out on number lines;
- using number lines to challenge and **overcome misconceptions**, for example those derived from 'two negatives make a positive';
- using number lines to **support rounding**, for example to nearest ten, unit, tenth, hundredth ... ;
- using number lines to support **understanding of aspects of proportionality**, including using unitary methods, scale-factors;
- tasks using **less obvious number lines**, for example an oblique line on a square grid where the only marked points are $\sqrt{20}$ and $\sqrt{80}$, or number lines in different modular arithmetics;
- how number lines can be used to support learning in **most topics** at any level in which questions have **numerical answers**; for example when ... ordering and comparing statistics, comparing solutions of equations, solving inequalities, presenting answers to A level questions.

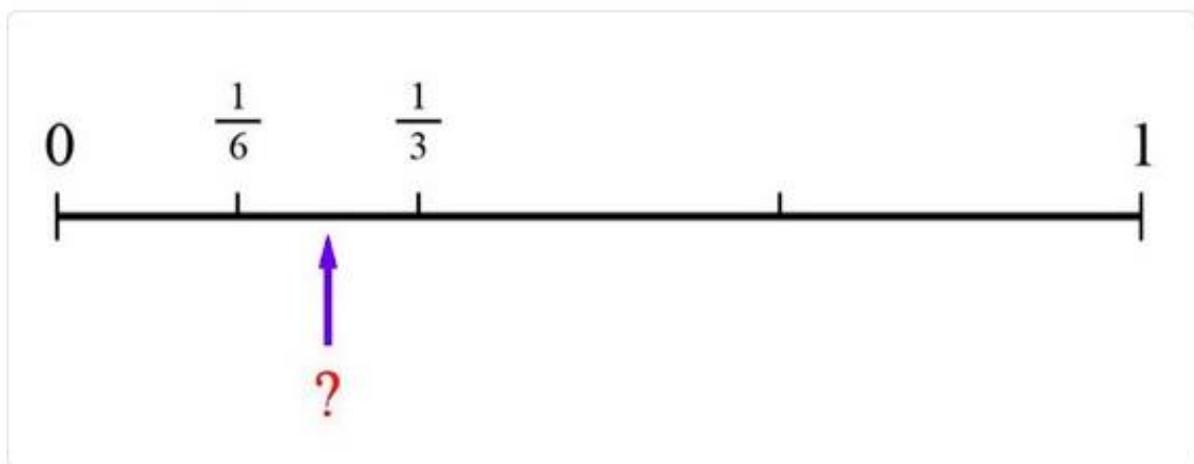

A particularly interesting sequence of tweets, about using a number line imaginatively to focus on a 'surprising' numerical relationship, followed from this tweet by [Danny Brown](#):

including this one from [Professor Smudge](#)

Professor Smudge @ProfSmudge · 16h

Interesting to consider how this (the red marks) changes things

and this one from [Martyn Yeo](#)

Martyn @martynyeouk · 17h

Think my year ones would struggle :/

Replying to @martynyeouk @ProfSmudge

Yes... year 5 or 6 might enjoy it?
